## DESIGN OPTION 4 (FINAL CONCEPT)

We at Hospital Designers and Developers India Pvt Ltd, have been passionately engaged in design and development of product and solutions that take healthcare to remote locations. Our eagerness to understand the clients need and offer him solutions that meet or excel his expectation in design, innovation, quality and delivery schedule, has made us an market leader in India and a known brand in the international market. Our strength comes from a strong background in Industrial design, with young Designers, Doctors and Engineers being part of the product development team, who are willing to devote hours towards making a good product, whether it is a mobile Field Hospital for the Armed forces or a Small spatiality Clinic for the elderly. Our responsibility not only ends in manufacturing but extends beyond by offering various medical related solutions and hand holding services to our clients through consultancy, turnkey services and training sessions, enabling our clients to get the best out of our products.

The Organisation has a strong Design and Development background and is a strong contender for specialised Mobile Healthcare solutions for use in the Field. Besides manufacturing, they also offering various medical related solutions to clients through consultancy services and training sessions in the field of Disaster management & Rescue, along with UNDP and St John,s Ambulance Services (Australia).

# Disaster Management & EMS, Rescue

This particular project of the company has been developed keeping in mind the requirements of the defense forces of the country as well as that of the government bodies/ health related organizations/ NGO's with allied requirements. These Mobile field units had been designed for the armed forces and international humanitarian NGO's who can use them for rapid deployment whenever & wherever required.

The Mobile hospitals are available in a mix of Tents and Carrying Container to give flexibility for transport and rapid deployment. The tents are Air-Conditioned and insulated and the containers are composed of lightweight Aluminum and steel, with hooks for easy and rapid airlifting. They are modular in nature and can be assembled in various configurations depending on the requirement.

One of the major problems that exists today is inadequate health care. This is due to various factors including inadequate transportation, lack of medical facilities and the high cost of permanent facilities. The realization that 1/5 of the world's population lives on or beside waterways gave rise to the idea of mobile clinic's capable of negotiating these shallow waters. Disaster First responders are available for land and river use.
